

# COMBINATION LOCK INSTRUCTIONS

(as used on aluminum Carry Case Model ALUMNDA306NF)

Our aluminum Carry Case Model ALUMNDA306NF is equipped with two "front change" combination locks. Each lock includes three numbered (0-9) rotating tumblers and a spring-loaded latch mounted to the upper lid portion of the case. Revolving the three tumblers to match your selected combination and sliding the button in the "opening position" direction will disengage the lock and allow you access into the case.

## TO SET YOUR COMBINATION:

FIRST, REMOVE & DISPOSE OF THE RED PLASTIC RETAINER BEFORE SETTING EACH LOCKS COMBINATION.

- (1) Select a 3 digit number that you can easily recall.
- (2) Press the button to the "change position" in the direction of the three tumblers. Holding the button in this position, use a ball point pen to rotate the tumblers to the desired settings. Now, release the button allowing it to return to the "normal position".
- (3) Your lock is now set to open on the three digits engaged at the time you released the button.

## CAUTION:

Accordingly - NEVER rotate the tumblers with the button held open UNLESS you make careful note of the tumbler settings upon release of the button.

The manufacturer is not responsible for damage resulting from misuse, abusive handling or failure to follow instructions.
