STYLE "F-4" Removable Front & Rear Lids-Shockmount

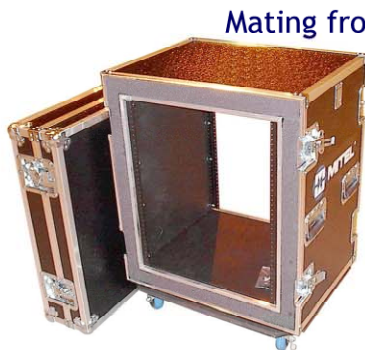

Style F-4 has a matching finished, case-construction, inner rack shell enclosed within a 2" foam lined, front and rear removable lid outer case. Rear rack rail is optional. This style is used when easy access is needed to front and rear of components. Standard rackable depth is 18". Please specify if more or less rackable depth is needed. Front and rear rack lids interlock for convenient storage.

Latching hardware is so precisely placed that they can be interchanged on Star Case racks of like-size & same case type or inverted 180 degrees while maintaining perfect alignment.

Removable, finished inner rack shell restrained by polyethylene foam cushions in lid while in transit.

Mating front & rear case lids create both an efficient lid storage solution as well as an additional case for cords, cables, etc.

F4 shockmount Rack Case with lids installed ready for any type of common carrier transitting.

PLEASE NOTE: Case shown here equipped with "optional" 3-1/2" heavy duty casters.

F4 Shockmount rack cases are built in strict conformance with all EIA dimensional guidelines as well as ATA (Air Transport Association) construction compliances. Minimum rackable case height is 4 RU (7-1/2"). Height variations are available in 1 RU (1-3/4") increments. Rackable case depth (excluding 3" front and 4" rear lids) ranges from 11" to the maximum depth required depending on component depth. Star Case types available are Carry Star 1/8", ATA Jr. 1/4", ATA Star 1/4" & 3/8", Super Star 1/4" & Ultra Star 1/2".
