

★ **STYLE "F-2" - Removable Lift-Off Lid**

Style F-2 rackmounts have an inner rack shell within a shock-protected, foam lined outer case. The outer case is available in Style B-3 or B-4.

The inner rack shell has handles for lifting from the shallow lower section of the outer case. This inner rack shell feature offers the user the option to position it wherever it may be needed.

Because the inner rack shell is protected by the outer case it stays clean and presentable for important presentations.

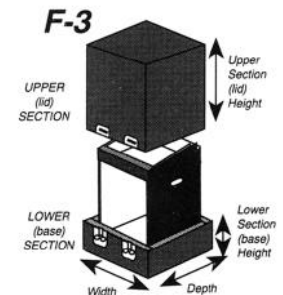

★ **STYLE "F-3" - Removable Lift-Off Lid**

Style F-3 has a 3/4 inch black painted inner plywood rack shell with front-loading vertical rack space and top-loading angled rack space. Optional rear-loading rack rail is available for times when rear mounting of cables and connectors is needed.

This style is used when easy access is needed to a top-loaded, angle-mounted component. The inner plywood rack shell has slotted openings for lifting from the shallow lower section of the outer case. This inner rack shell feature offers the user the option to position it wherever it may be needed.

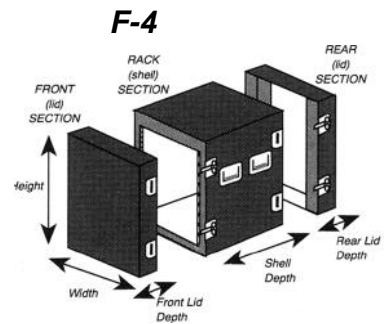

Because the inner rack shell is protected by the outer case it stays clean and presentable for important presentations.

★ **STYLE "F-4" - Removable Front & Rear Lid**

Style F-4 rackmount cases are designed for easy front and rear access to components and equipment. This popular style offers the user more features and benefits than any other rackmount case.

- 1) You get the convenience of front and rear removable sections (lids.)
 - 2) Interlocking tongue-and-groove valance is designed in such a way that both front and rear sections (lids) mate. This avoids damage common to lids that don't have this interlocking STAR CASE feature. Precision manufacturing processes and tight production tolerances, enable us to offer this exclusive. This also eliminates the necessity to differentiate between "UP" and "DOWN" when re-attaching front and/or rear sections (lids). Both lids fit either way.
 - 3) You have the added protection of a shockmounted inner rack section (shell). The terms shock protected, shock mounted, and shock isolated refer to the 2 inch foam lining between the inner rack shell and the outer case.
 - 4) Because the inner rack shell is protected by the outer case it stays clean and presentable for important presentations.
 - 6) Rigid ethafoam is installed in the front and rear sections (lids), and bottom of shell section to prevent the inner rack shell from shifting while in transit.
 - 6) Inner rack rails are adjustable to compensate for minor differences in component face panel sizes. We supply 1/16 inch metal spacers between the case panel and rackmount rail. Adjustability is achieved by adding or removing these spacers.
- When the inner rack shell is removed, the outer case can be used for other applications.

★ **STYLE "F-4D" - Double-Wide Removable Front & Rear Lid**

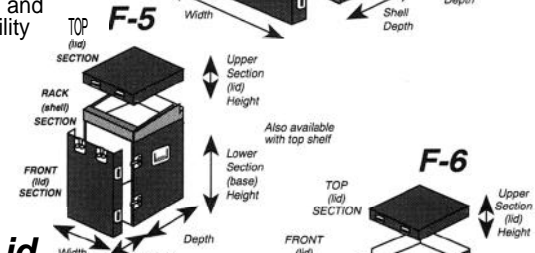

Style F-4D is a double-wide Style F-4 rackmount case. The center rack shell section has a permanent partition dividing it into two equal-sized vertical rackmount sections. Interlocking tongue-and-groove valance is designed in such a way that both front and rear lid sections mate. This avoids damage common to lids that don't have this STAR CASE interlocking feature.

Sometimes, Style F-4 rackmounts exceed practical heights, making them top-heavy and difficult to maneuver. Style F-4D rackmounts split the height in half, increasing stability and improving functionality.

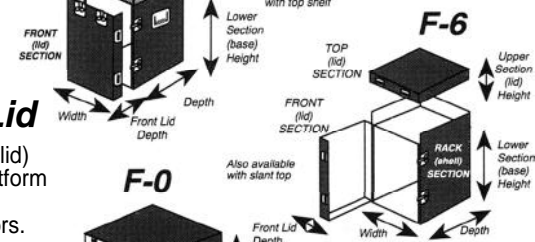

★ **STYLE "F-5" - Removable Front and Top Lid**

Style F-5 rackmounts have removable front section (lid) and top section (lid) which incorporates front loading vertical rack space and top loading angled rack space. Instead of a removable rear section there is a mechanical catch and hinged rear trap-door for easy access to cables and connectors.

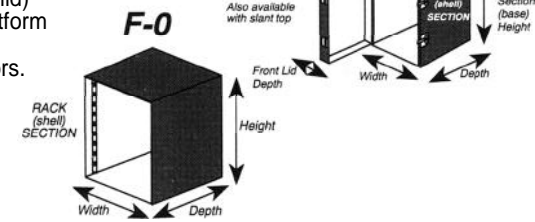

★ **STYLE "F-6" - Hinged Front and Removable Top Lid**

Style F-6 rackmounts have a hinged front section (lid) and a removable top section (lid) which incorporates front loading vertical rack space and a top-loading horizontal platform (or top-loading rackmount space). Instead of a removable rear section there is a mechanical catch and hinged rear trap-door for easy access to cables and connectors.

★ **STYLE "F-O" - Rackmount Shell Only**

Style F-O is a simple four-sided rack shell. F-O rack shells are generally used for rack component storage or display. When components need to be rack mounted but no shipping is intended, F-O is your best choice.
