

CASE CATALOG

STAR CASE "INTERIORS"

When communicating to STAR CASE, you will be asked about 2 distinctively different case interiors; our Basic 1" Foam Lined Interior or our Deluxe Blocked Interior. The complexity of the item you'll be placing in the case and the frequency and severity of travel expected will determine the most effective case interior.

The Basic 1" Foam Lined Interior is intended for average travel schedules of items having few if any protrusions or odd angles.

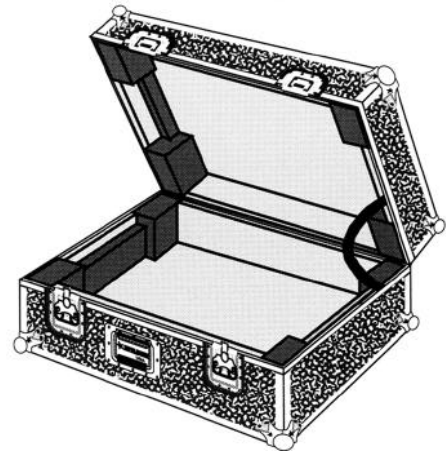

The Deluxe Blocked Interior will have strategically placed polyester and/or polyethylene foam blocks bonded to the case interior. These blocks provide additional support to the critical surfaces of your equipment.

Remember, the case interior is the most critical shock absorbing part of your entire case.

★ **BASIC FOAM LINED INTERIOR** 1" Polyester (soft) foam lined case

★ **DELUXE BLOCKED INTERIOR** Foam lined case with polyester (soft) or polyethylene (hard) foam support blocking at critical points

STAR CASE "INTERIOR MATERIALS"

- ★ Polyester Foam Interior
- ★ Polyethylene Foam Interior
- ★ Anti-Static Foam interior
- ★ High Density Foam Interior
- ★ Combination Foam Interiors
- ★ Bare Wood Interior (BW)
- ★ Painted Interior (PT)
- ★ Vinyl Interior (VT)
- ★ Plush Interior (PL)
- ★ Velour Interiors (VL)
- ★ Carpeted Interior (IC)
- ★ Canvas Interior

We offer tough canvas liners that protect the foam from tearing and provide an excellent and long lasting case interior.

STAR CASE can finish your case interior with numerous different materials such as polyester(soft) and/or polyethylene (hard) foams in various degrees of density. We offer anti-static varieties of foam for sensitive magnetic media, PC boards, and hard disk drives.

We offer soft plush and velour materials in several colors for items sensitive to scratching and abrasion. This lining method is often recommended for optics, lenses, scientific instrumentation, and other highly delicate devices. The plush and velour material is neatly draped and permanently bonded directly to the foam lining of the case.

We offer vinyl, indoor/outdoor carpeting, or black painted interior. These options are used as a case liner when padding and shock absorption are not needed. These linings are ideal for exhibit panels, accessory compartments, tool cases, cable cases, and other similar non-breakable items needing organization rather than shock protection. The plush and velour material is neatly draped and permanently bonded directly to the wall of the case or to the foam lined interior of the case.

We also offer combination foam linings where space is absolutely critical. One inch of polyester (soft) foam can be bonded to one inch of polyethylene (hard) foam or any combination required. Your STAR CASE design engineer can explain this design option in greater detail.
