Installing your Professional Series wallmount rack brackets is simple. Use the photo below as a useful guide. First, determine the wall height position of your rack. Hold one of the wallmount brackets against the wall as shown in the photo below so outermost 5/16" circular holes are positioned 1" below top of preferred uppermost rack unit. Wallmount bracket must be positioned against wall so its flat side is flush with wall. Make sure the outermost circular holes are lined up with wall studs if supplied lag screws & washers are to be used in mounting. If hanging your rack on a concrete or masonry wall surface, you'll need to purchase specialized fasteners. Use a level to make sure your installation is plumb. After upper bracket is securely attached to your wall, hang your Professional Series rack as shown below. When securely seated, position lower wall bracket\* as shown and fasten as you did the upper bracket.

\* NOTE: Under all circumstances, lower bracket MUST be installed!

**Hardware included:**

4 - 3/4" Flat washers

4 - 2" Lag bolts
